Ecological Emergy Accounting for a Limited System: General Principles and a Case Study of Macao (Springer Environmental Science and Engineering) Kampeng Lei, Shaoqi Zhou, Zhishi Wang

This book builds on the analyses of Eugene and Howard Odum and introduces the concept of systems ecology. Ecological emergy accounting represents a breakthrough because it allows researchers to integrate man-made capital and natural capital so that human and natural concerns can be addressed using a consistent system of units. This book develops an emergy accounting model that is suitable for describing urban systems, thereby providing a comprehensive picture of those systems. To make the theory concrete, the authors use China's Macao Special Administrative Region as a case study, and compare the results for Macao with those of other urban ecosystems around the world in the fields of ecological economy, tourism, waste treatment, gambling industry, land reclamation and resource consumption etc.

Dr. Kampeng Lei is an advisory senior technician at the Environmental Protection Bureau, Government of Macao, China; **Shaoqi Zhou** is a professor at the College of Environment and Energy, the South China University of Technology, and the Guizhou Academy of Sciences, China; **Zhishi Wang** is a professor at the Faculty of Science and Technology, the University of Macau, China.
