High temperatures elicit a variety of reactions in gases, including increased molecular vibrations, dissociation, chemical reactions, ionization, and radiation of light. In addition to affecting the motion of the gas, these processes can lead to changes of composition and electrical properties, as well as optical phenomena.

These and other processes of extreme conditions — such as occur in explosions, in supersonic flight, in very strong electrical discharges, and in other cases — are the focus of this outstanding text by two leading physicists of the former Soviet Union. The authors deal thoroughly with all the essential physical influences on the dynamics and thermodynamics of continuous media, weaving together material from such disciplines as gas dynamics, shock-wave theory, thermodynamics and statistical physics, molecular physics, spectroscopy, radiation theory, astrophysics, solid-state physics, and other fields.

This volume, uniquely comprehensive in the field of high-temperature gas physics and gas dynamics, was edited and annotated by Wallace D. Hayes and Ronald F. Probst, leading authorities on the flow of gases at very high speeds. It is exceptionally well suited to the needs of graduate students in physics, as well as professors, engineers, and researchers.

### **From reader reviews:**

#### **Patricia Smith:**

Why don't make it to be your habit? Right now, try to prepare your time to do the important act, like looking for your favorite guide and reading a book. Beside you can solve your long lasting problem; you can add your knowledge by the book entitled Physics of Shock Waves and High-Temperature Hydrodynamic Phenomena (Dover Books on Physics). Try to the actual book Physics of Shock Waves and High-Temperature Hydrodynamic Phenomena (Dover Books on Physics) as your buddy. It means that it can for being your friend when you feel alone and beside regarding course make you smarter than ever. Yeah, it is very fortunated in your case. The book makes you a lot more confidence because you can know almost everything by the book. So , let's make new experience as well as knowledge with this book.

#### **Shawna Vaughn:**

Book is written, printed, or outlined for everything. You can understand everything you want by a reserve. Book has a different type. As you may know that book is important point to bring us around the world. Next to that you can your reading proficiency was fluently. A publication Physics of Shock Waves and High-Temperature Hydrodynamic Phenomena (Dover Books on Physics) will make you to possibly be smarter. You can feel a lot more confidence if you can know about almost everything. But some of you think that open or reading a new book make you bored. It's not make you fun. Why they may be thought like that? Have you in search of best book or acceptable book with you?

#### **Carol Smith:**

As people who live in often the modest era should be change about what going on or details even knowledge to make these keep up with the era that is always change and make progress. Some of you maybe will probably update themselves by reading books. It is a good choice in your case but the problems coming to you actually is you don't know what kind you should start with. This Physics of Shock Waves and High-Temperature Hydrodynamic Phenomena (Dover Books on Physics) is our recommendation to cause you to keep up with the world. Why, because this book serves what you want and need in this era.

#### **Louis Trent:**

Do you certainly one of people who can't read satisfying if the sentence chained from the straightway, hold on guys this kind of aren't like that. This Physics of Shock Waves and High-Temperature Hydrodynamic Phenomena (Dover Books on Physics) book is readable by means of you who hate the straight word style. You will find the facts here are arrange for enjoyable reading through experience without leaving actually decrease the knowledge that want to offer to you. The writer regarding Physics of Shock Waves and High-Temperature Hydrodynamic Phenomena (Dover Books on Physics) content conveys thinking easily to understand by lots of people. The printed and e-book are not different in the information but it just different such as it. So , do you nonetheless thinking Physics of Shock Waves and High-Temperature Hydrodynamic

Phenomena (Dover Books on Physics) is not loveable to be your top collection reading book?
