Across the Boundaries: Extrapolation in Biology and Social Science (Environmental Ethics and Science Policy Series) Daniel Steel

The biological and social sciences often generalize causal conclusions from one context or location to others that may differ in some relevant respects, as is illustrated by inferences from animal models to humans or from a pilot study to a broader population. Inferences like these are known as extrapolations. The question of how and when extrapolation can be legitimate is a fundamental issue for the biological and social sciences that has not received the attention it deserves. In *Across the Boundaries*, Steel argues that previous accounts of extrapolation are inadequate and proposes a better approach that is able to answer methodological critiques of extrapolation from animal models to humans.

Across the Boundaries develops the thought that knowledge of mechanisms linking cause to effect can serve as a basis for extrapolation. Despite its intuitive appeal, this idea faces several obstacles. Extrapolation is worthwhile only when there are stringent practical or ethical limitations on what can be learned about the target (say, human) population by studying it directly. Meanwhile, the mechanisms approach rests on the idea that extrapolation is justified when mechanisms are the same or similar enough. Yet since mechanisms may differ significantly between model and target, it needs to be explained how the suitability of the model could be established given only very limited information about the target. Moreover, since model and target are rarely alike in all relevant respects, an adequate account of extrapolation must also explain how extrapolation can be legitimate even when some causally relevant differences are present.

Steel explains how his proposal can answer these challenges, illustrates his account with a detailed biological case study, and explores its implications for such traditional philosophy of science topics *ceteris paribus* laws and reductionism. Finally, he considers whether mechanisms-based extrapolation can work in social science.

From reader reviews:

Mary Sims:

Do you have favorite book? If you have, what is your favorite's book? Book is very important thing for us to learn everything in the world. Each e-book has different aim or maybe goal; it means that e-book has different type. Some people sense enjoy to spend their a chance to read a book. They may be reading whatever they consider because their hobby is reading a book. Why not the person who don't like reading a book? Sometime, man or woman feel need book whenever they found difficult problem or exercise. Well, probably you will need this Across the Boundaries: Extrapolation in Biology and Social Science (Environmental Ethics and Science Policy Series).

Judith Bode:

What do you with regards to book? It is not important to you? Or just adding material when you require something to explain what the ones you have problem? How about your free time? Or are you busy man? If you don't have spare time to complete others business, it is give you a sense of feeling bored faster. And you have spare time? What did you do? Everyone has many questions above. They should answer that question because just their can do this. It said that about e-book. Book is familiar in each person. Yes, it is proper. Because start from on pre-school until university need this Across the Boundaries: Extrapolation in Biology and Social Science (Environmental Ethics and Science Policy Series) to read.

Cindy Coleman:

The guide untitled Across the Boundaries: Extrapolation in Biology and Social Science (Environmental Ethics and Science Policy Series) is the book that recommended to you you just read. You can see the quality of the guide content that will be shown to you actually. The language that creator use to explained their ideas are easily to understand. The copy writer was did a lot of investigation when write the book, so the information that they share to you personally is absolutely accurate. You also might get the e-book of Across the Boundaries: Extrapolation in Biology and Social Science (Environmental Ethics and Science Policy Series) from the publisher to make you much more enjoy free time.

Jenna Quintana:

Can you one of the book lovers? If so, do you ever feeling doubt when you find yourself in the book store? Attempt to pick one book that you never know the inside because don't judge book by its protect may doesn't work is difficult job because you are frightened that the inside maybe not as fantastic as in the outside search likes. Maybe you answer is usually Across the Boundaries: Extrapolation in Biology and Social Science (Environmental Ethics and Science Policy Series) why because the great cover that make you consider concerning the content will not disappoint anyone. The inside or content is usually fantastic as the outside or cover. Your reading sixth sense will directly make suggestions to pick up this book.
